
HOW

Depending on the institution where you study, you can often gain experience with transdisciplinary education as a student. Various universities and colleges offer transdisciplinary courses, modules, minors, or honors programs. These programs focus on working on a complex societal issue—students work together with parties outside education on a question. Examples (from the Netherlands) include the [Value Creators program](#) at Windesheim, De Tussenruimte at Avans, and the [Shaping Responsible Future](#) master at the University of Twente.

In the TRAIL, you will learn about the different phases of transdisciplinary education. The first phase is about the team and the collaboration within it. The next phase shows how transdisciplinary education is developed. The following phase is about participating in the transdisciplinary program and the results you can achieve. In the final phase, questions help you evaluate and look ahead to new challenges.
