Practice

Here you'll find questions and exercises to help regain perspective when the project no longer has a clear guiding vision.

Find the Guiding Vision

Questions:

- ~~What is the purpose of the project?~~ **What is the purpose of the interdisciplinary education project?**
- What's standing in the way?

-
- What are the blind spots?
 - What have we achieved so far, and which ones do we still need to achieve?

Exercise:

Imagine it's two years later. Our project was a great success. What have we achieved? And what came next?

Planning

Questions:

- What absolutely still needs to happen?
- What are we definitely going to do?
- What will you do *now* to move the project forward?
- How can we get more out of our planning?

Exercise:

Review the original intent (or goals) and adjust them if needed. Look at the previously made planning and revise it where necessary.

Collaboration

Questions:

- How can we optimize collaboration in the TDO project?
- What are your strengths in collaboration? How can they help us now?
- How can we support each other now that things are tough?
- What resources should we activate right now?

Exercise:

Share experiences where collaboration worked really well and identify the success factors.

Success Experiences

Questions:

- Describe a moment you truly enjoyed. What made it so special?

-
- Describe a moment when the TDO project was at its best.
 - Name three small things that are going well in the TDO project.
 - What does our TDO project need *right now* to be successful?

Exercise:

Dreaming:

Imagine we're a bit further along and the TDO project is a huge success. Much has been achieved in a short time. Everyone is engaged, enjoying the work, and the target audience has been reached. Describe what has been completed, how it was done, and by whom. Write this down individually and exchange answers. Immediately develop any ideas that arise into follow-up actions.

Not-Knowing

Questions:

- How do you get through when you didn't know how to proceed?
- When you don't know what opportunities exist, what is your strategy?
- Not knowing can cause uncertainty. What helps you in times of uncertainty?
- How do you deal with resistance?
- How do you deal with the unknown?
