

How to evaluate?

Evaluation can be organized in many ways. Discuss your approach for the starting this process and develop an evaluation plan. In this plan, you outline what you will evaluate, with which tools, when, and how often. Specify how the group will address and communicate the areas for improvement. You can structure the this plan according to the *Plan, Do, Check, Act (PDCA) cycle* (Deming, 1950):

In the Plan phase, you develop the evaluation plan. In the Do phase, you implement the plan. In the Check phase, you determine what improvements are needed based on the data from the Do phase. In the Act phase, you implement the improvements.

Evaluation Tools

You can use various tools for evaluation, such as questionnaires, panel discussions, observation, feedback, reflection, and intervision.

Questionnaires: questionnaires are suitable for gathering large amounts of information, such as the experiences of team members.

Observations: observations can evaluate behaviour, interaction, communication, or collaboration.

Panel Discussions: panel discussions can gather in-depth information from a limited group of people about their experiences or opinions.

Interviews: interviews can obtain detailed personal insights or experiences.

Reflections: analysing reflections provides insight into the development of team members.
