
Introduction

Different partners will likely want to evaluate different things. Students and educators may focus more on student outcomes like grades and academic progress. This seems very different from the perspective of a policymaker or NGO, who may want to evaluate the **solution outcomes** for the complex problem. We must also not forget the **invisible outcomes** of the transdisciplinary education process, such as the development of competencies among all partners, the collaboration process, and the **spin-off** the project generates in various contexts. In an evaluation that does justice to the **shared and potentially evolving learning process** in a transdisciplinary project, these different evaluation outcomes must coexist.

On the **practice page**, you'll find various types of evaluation tools.

Theory

This page is still under development. More theoretical insights will follow soon.

Practice

There are various tools you can use for evaluation, such as:

- **Questionnaires**. Systematically collect large amounts of data.
- **Observations**. Evaluate behavior, interaction, communication,

-
- **Panel Discussions:** Gather deep qualitative insights from a panel of experts.
 - **Interviews:** Obtain detailed personal insights or experiences.
 - **Reflections:** Analyze reflections to gain insight into participants' experiences.
