
Various Roles

In a transdisciplinary collaboration, you need to fill both existing and new roles. These roles can change throughout the process. Possible roles include:

- Initiator
- Coordinator
- Networker
- Knowledge Connector
- Process Facilitator
- Expert
- Doer
- Connector

Tools and Tips: Involvement Matrix

The Involvement Matrix is a tool designed to facilitate discussions about each individual's desired role in a (research) project. Originally developed for collaboration with patients (a prime example of an 'experts by experience' group), it can be applied more broadly in various contexts, including your project.

Additional Tips to Get to Know Each Other and Each Other's Roles Better:

- **Get a Peek into Each Other's Work:** Spend a day with another team member to see what they do and what drives them (Van Bussel et al., 2018; Verkleij & Francke, 2017; Wagemakers et al., 2024).
- **Meet Formally and Informally:** Organize kick-offs, activity days, knowledge-sharing sessions, team activities, work meetings, app groups, or play a game to get to know each other in different ways.
- **Play a Role-Playing Game:** Step into a specific role and view a situation from that perspective.
