
Harmony in Collaboration

To collaborate effectively during your transdisciplinary process, you take five conditions into consideration. The "Praktijkgids Transdisciplinair Samenwerken" (The Green Brain, 2023) outlines these conditions:

1. **Equality:** Ensure that each team member's contribution has equal value. Scientific knowledge should not outweigh practical insights. All perspectives must come together to tackle challenging questions.
2. **Responsibility and Ownership:** Collective responsibility and ownership drive transdisciplinary processes. All team members should view and experience problem-solving together.
3. **Trust and Transparency:** Build trust and ensure transparency. A safe space is necessary for open communication among team members.
4. **Interest of Each Participant:** Each team member must have a personal stake in the project, balancing everyone's contributions and benefits. Discussing your motivation for participating helps achieving this balance.
5. **Attention to Culture and Communication:** Pay attention to everyone's professional background and language. This helps to bridge differences in values, norms, unwritten rules, and assumptions.

Tool: Partnership Framework

The partnership framework (Dutch title: partnerschapskaart) is a dialogical tool that can assist in building partnership relationships in transdisciplinary (mixed) groups. The activity consists of five steps, where you fill in the partnership map from right to left in a mixed group of stakeholders/partners involved in a project or program.
